

ABSTRACT

This project "TEXTILE'S STOCK MANAGEMENT SYSTEM" has been developed for the computerization of handling stock of a textile shop. This project mainly deals with the material items, suppliers, sales, purchase basis. The project get all the details about the textile items stock and how many of the material have sold and purchased. This makes the manager to manage the materials easily and can retrieve the information easily. The main goal of this project is to reduce manual works, increase the processing speed and ensure reliability of data. This project "textile's Stock Management System" deals with stock Management in a concern. This project also takes care of maintaining records of all the sales details, purchase details of the concern.

Keywords: *Textile stock management, inventory control, sales purchase tracking, material handling, supplier management*

திட்ட சுருக்கம்

துணிக்கடையின் கையிருப்பு மேலாண்மை அமைப்பு என்ற இந்த திட்டம், ஒரு துணி விற்பனை கடையின் கையிருப்பு மேலாண்மையை கணினி மயமாக்கும் நோக்கில் உருவாக்கப்பட்டுள்ளது. இந்த திட்டம் முக்கியமாக பொருட்கள், சப்ளையர்கள், விற்பனை, வாங்கும் விவரங்களை சார்ந்ததாகும். இதில், துணி பொருட்களின் கையிருப்புகள் மற்றும் எவ்வளவு பொருட்கள் விற்கப்பட்டுள்ளன, எவ்வளவு வாங்கப்பட்டுள்ளன என்பதற்கான முழுமையான தகவல்களையும் பெற முடிகிறது. இத்திட்டம் மூலம் நிர்வாகி கையிருப்புகளை எளிதாக நிர்வகிக்க முடிகிறது மற்றும் தேவையான தகவல்களை விரைவாகவும் துல்லியமாகவும் மீட்டெடுக்கலாம். இந்த திட்டத்தின் முக்கிய நோக்கம் கையேடு பணி சுமையை குறைத்தல், செயல்முறை வேகத்தை அதிகரித்தல் மற்றும் தரவின் நம்பகத்தன்மையை உறுதிசெய்தல் ஆகும். மேலும், இந்த திட்டம் விற்பனை மற்றும் வாங்கும் விவரங்கள் தொடர்பான அனைத்து பதிவுகளையும் தானாக பராமரிக்கும் வகையில் வடிவமைக்கப்பட்டுள்ளது.

முக்கிசொற்கள்: துணி கையிருப்பு மேலாண்மை, பொருள் கையிருப்பு கட்டுப்பாடு, விற்பனை மற்றும் வாங்கல் கண்காணிப்பு, பொருள் கையாளல், வழங்குநர் மேலாண்மை

ACKNOWLEDGEMENT

First and foremost I express my deep, heart-felt gratitude and reverence of my research supervisor and mentor **Dr.MANIKANDAN G**, Head Of Department, Master of Computer Applications, Priyadarshini Engineering College, Vaniyambadi, for his guidance, advice, support, and encouragement during this research.

I sincerely thanks to Management of **PRIYADARSHINI ENGINEERING COLLEGE** and **ANNA UNIVERSITY** for given me an opportunity to make smarter in Computer Applications.

I extend my sense of gratitude and sincere thanks to **Thiru. S. NITHIYANANDAM**, Chairman, **Mr. K.T. ANBAZHAGAN**, Managing Trustee and **Thirumathi. SAROJA RATHINAM**, Correspondent of Priyadarshini Engineering College for given me an opportunity to be a student in this reputed college.

I warmly thanks to **Dr.K.VIJAYARAJ**, Principal of Priyadarshini Engineering College for provided the appropriate permission of this project.

I express my heartfelt thanks to the Head of the Department **Dr.MANIKANDAN G** for his support and encouragements. I also thank all faculty members, Department of Computer Application, Priyadarshini Engineering College, Chennai for their input, valuable discussions, and accessibility.

Finally, I bow to the ALMIGHTY for blessing me with good health and strength throughout the period of my research work.

(GOKUL K)

CHAPTER 1

INTRODUCTION

1.1 PROJECT OUTLINE

The textile stock management project aims to develop a system for efficiently tracking inventory, managing suppliers, optimizing stock orders, and generating reports to ensure seamless textile operations.

1.2 PROJECT OBJECTIVE

The objective of this project is to develop an application for textile stock management system which helps to manage the stock details. The textile stock management system manually storing customer details, supplier details purchase & sales details and stock available. As storing the detail in books there is a chance of inconsistency, accessing a particular item is very time consuming and boring task and the probability of errors during calculating is very high. Due to these drawbacks of the manual existing system, the new computerized automated system is inevitable.

CHAPTER 2

COMPANY PROFILE

2.1 About the Company

SK COLLECTIONS, based in Gudiyattam, Tamil Nadu, has been operating successfully for the past five years as a specialty textile retail store. Our company expertly manages the supply and sale of fabric products, offering a wide variety that includes premium dress materials, vibrantly colored fabrics, and innovative designs infused with traditional craftsmanship, all tailored to meet the needs of our diverse clientele.

Our core strengths include:

- Procuring top-quality materials at competitive purchase prices,
- Maintaining comprehensive, up-to-date inventory lists,
- Ensuring reliable stock availability and timely replenishment.

At SK COLLECTIONS, we're committed to trustworthiness, efficient service, and seamless stock availability for our patrons. Thanks to our well-structured operational practices, we continue to grow and are well-positioned as the ideal partner for your Textile Stock Management Project.

CHAPTER 3

SYSTEM ANALYSIS

3.1 EXISTING SYSTEM

At present all the activities in stock details are handled manually. Manual data processing system, while providing economy, flexibility, and adaptability at low data volumes become more complex when the volume of data becomes large. As an organization expands in size and functions, a stage is reached when manual procedure becomes inadequate and inefficient. Difficult to maintain records, this textile has manual work on the paper. It increases the chance of error, lots of time consumed for each report generation, no security on data.

3.2 PROPOSED SYSTEM

The textile stock management system a new computerized process needs to be developed, the computerized with avoid human error. System can immediately get the data and generate report, data will be handled quickly, efficiently and accurately, provide better security in new system, easy to maintain stock details. Time consuming for each report generation can be done quickly. The development of the new system contains the following activities which try to automate the entire process keeping in view of the database integration approach. User friendliness is provided in the application with various controls.

3.3 METHODOLOGY:

Implementing agile methodology in the development of a textile stock management system involves iterative cycles that promote flexibility and continuous improvement. Here's a structured approach to the key phases:

Fig No 3.3 Agile Methodology

Planning:

- Define objectives: collaborate with stakeholders to establish clear goals for the stock management system, such as real-time inventory tracking and efficient order processing.
- Assemble the team: form a cross-functional team including developers, designers, testers, and domain experts.
- Develop the product backlog: create a prioritized list of features and tasks (user stories) based on stakeholder input.

Designing:

- System architecture: design a scalable and flexible architecture that accommodates future growth and changes in the textile industry.
- User interface (UI) design: develop intuitive lockups and prototypes, incorporating feedback from potential users.
- Integration planning: plan for seamless integration with existing systems, such as procurement and sales platforms.

Development:

- Planning: divide the development process into short cycles, typically lasting 2-4 weeks, each focusing on delivering specific features.
- Coding: develop features as per the plan, ensuring adherence to coding standards and best practices.
- Daily stand-ups: hold brief daily meetings to discuss progress, challenges, and coordinate efforts.

Testing:

- Continuous testing: perform regular unit, integration, and user acceptance testing throughout the development cycle.
- Feedback loops: use feedback from testing to refine features and fix issues promptly.
- Performance evaluation: assess the system's performance under various conditions to ensure reliability.

Deployment:

- Incremental releases: deploy the system in stages, starting with core functionalities and gradually adding more features.

- User training: provide training sessions and documentation to ensure users can effectively operate the system.
- Monitor and support: continuously monitor system performance and address any issues that arise post-deployment.

Review:

- Retrospectives: to evaluate what went well, identify areas for improvement, and adjust processes accordingly.
- Stakeholder feedback: regularly gather feedback from stakeholders to ensure the system aligns with business objectives.
- Continuous improvement: iterate on the system based on feedback and changing market demands to enhance functionality and user satisfaction.

This agile approach allows for adaptability and responsiveness to the dynamic needs of the textile industry, ensuring that the stock management system evolves in line with user requirements and market conditions.

CHAPTER 4

SYSTEM CONFIGURATION

4.1 HARDWARE CONFIGURATION

Processor	:	Intel Core I5
Ram	:	16GB
Hard Disk	:	512GB

4.2 SOFTWARE CONFIGURATION

Operating System	:	Windows11
Fornt-End	:	HTML, CSS, Java Script
Back-End	:	PHP
Database	:	MYSQL
Server	:	XAMPP

4.3 Software Description

HTML

Hypertext Mark-up Language HTML forms the backbone of web content, providing the basic structure of web pages. It uses a system of tags to define elements like headings, paragraphs, links, and images, organizing content in a hierarchical manner.

CSS

Cascading Style Sheets CSS is responsible for the visual presentation of web pages. It allows developers to apply styles to HTML elements, controlling aspects such as layout, colours, fonts, and responsiveness across different devices.

JavaScript

JavaScript adds interactivity and dynamic behaviour to web pages. It enables features like form validation, animations, and asynchronous content loading, enhancing user engagement and experience.

PHP

Hypertext Pre-processor PHP is a server-side scripting language designed for web development. It processes data on the server, generating dynamic web page content. PHP is commonly used for tasks such as handling form submissions, session management, and database interactions.

MySQL

MySQL is a relational database management system used to store and manage data for web applications. It works seamlessly with PHP, allowing developers to create, read, update, and delete data in a structured manner.

XAMPP

XAMPP is a free and open-source cross-platform web server solution stack developed by Apache Friends. It includes the Apache HTTP Server, Maria DB database, and interpreters for PHP and Perl scripting languages. The name "XAMPP" is an acronym where "X" stands for cross-platform, and the subsequent letters represent Apache, Maria DB, PHP, and Perl.

CHAPTER 6

PROJECT DESCRIPTION

6.1 Problem Definition

Problem Statement:

The process of textile stock management system records poses significant challenges, including data entry errors, time-consuming processes, and difficulties in retrieving specific information. Transitioning from manual record-keeping to a computerized system aims to address these issues by enhancing accuracy, efficiency, and accessibility in managing textile inventory.

Impact Of These Problems:

- Lost sales and customer dissatisfaction: stockouts can lead to missed sales opportunities, while excess stock can lead to waste or increased storage costs.
- Increased operational costs: inefficient stock management leads to higher storage costs, procurement errors, and the need for additional labour for manual tracking and reporting.
- Reduced profit margins: poor stock management impacts the overall profitability due to wasted resources, lost sales, and increased procurement costs.
- Low efficiency: lack of automated systems and real-time data leads to inefficiencies in inventory management and decision-making.
- Supply chain disruptions: without accurate stock tracking and timely ordering, the supply chain becomes less predictable, leading to potential delays in textile production or product shipments.

Proposed Solution

To address these problems, a comprehensive Textile Stock Management System is needed that can:

- Automate stock tracking: enable real-time tracking of stock across multiple warehouse locations with accurate updates.
- Supplier management: provide a system to store supplier details, track orders, and manage purchase orders efficiently.
- Real-time alerts & notifications: implement alerts for low-stock levels, out-of-stock products, and pending orders to facilitate timely reordering and avoid stockouts.
- Inventory forecasting: leverage historical data, sales trends, and seasonal demands to predict future stock requirements and improve procurement planning.
- Data-driven reporting: generate customizable reports on stock levels, product movement, and supplier performance, enabling better decision-making.
- Integration with warehouse operations: improve warehouse efficiency by integrating inventory management with order picking and shipping processes.
- Cost reduction: help reduce excess inventory, minimize wastage, and streamline procurement processes to lower operational costs and improve profitability.
- User-friendly interface: provide a simple, intuitive interface for staff to quickly and easily manage stock and perform necessary actions, such as adding, updating, or reporting stock levels.

6.2 Module Description

Login

Login page is used for security using this page, the authorized admin only log onto system. The fields are Password-Security Code used for log into system.

Product Stock

The product stock used to store the material details for the admin and used it to maintain for long time, it can be retrieved it whenever we want easily, but in manual it is difficult to process.

Sales Detail

Sales detail contains the product that the admin knows the product is sales. And it will easily identify to find the users have purchased the materials. It contains the detail of product is sales.

Supplier Detail

It stores the supplier details for admin and it may use to identify the details of supplier. And it needs to identify when stock has it can be searched and get the details.

Customer Detail

It stores the customer details for admin, and it may use later to identify the details of customer. And it needs to identify when the stock has missed it can be searched and get the details.

Purchase Detail

Admin used to purchase the material from the supplier. The detail stored for admin for long time it needs to increase the stock for the admin.

Customer Payment Detail

Customer payments are transactions where customers transfer funds to businesses in exchange for goods or services. In the textile industry, managing customer payments effectively is crucial for maintaining healthy cash flow and fostering strong business relationships.

Billing Invoice

Billing invoice used for getting the data for later use to know the customer detail and supplier detail for admin and may get the details whenever we need the data problem occurred

CHAPTER 7

SOFTWARE TESTING AND MAINTANENCE

7.1 System Testing

System testing is the stage of Implementation Which is aimed at ensuring that the system works accurately and efficiently before live operation commences. Testing is vital to the success of the system. An elaborate testing of data is prepared and the system is tested using this data. While testing error noted and corrections are modes. The users are trained to operate the developed system. Both hardware and software securities are made to run the developed system successfully in future.

7.2 Types of Testing

- Unit Testing
- Integration Testing
- Validation Testing
- Output Testing
- User Acceptance Testing

7.2.1 Unit Testing

Unit testing focuses verification efforts on the smallest unit of software design, the module. This is known as "Module Testing". The modules are tested separately. This testing is carried out during programming stage itself. In this testing step each module is found to be working satisfactorily as regard to the expected output from the module.

7.2.2 Integration Testing

Integration testing is a systematic technique for constructing tests to uncover errors associated with in the interface. In this project, all the module combined, and the entire program is tested as a whole. Thus, in the integration testing step, all the errors uncovered are corrected for the text testing steps.

7.2.3 Validation Testing

Validation Testing is where requirements established as a part of software requirement analysis is validated against the software that has been constructed. This test provides the final assurance that the software meets all functional, behavioral and performance requirements. The errors, which are uncovered during integration testing is corrected during this phase.

7.2.4 Output Testing

After performing the validation testing, the next step is out testing of the proposed system since no system could be useful if it does not produce the required output in the specific format. The output generated or displayed by the system under consideration is tested asking the users about the format required by then. Here, the output is considered into two ways, one is on the screen and other is printed format The output format on the screen is found to be correct as the format designed according to the user needs. For the hard copy also: the output comes out as specified by the user. Hence output comes out as specified by the user. Hence output texting doesn't result in any connection in the system.

7.2.5 Acceptance Testing

User acceptance of a system is the key factor for the success of any system. The system under consideration is tested for user acceptance by constantly keeping in touch with the prospective system users at time developing and making for Proxy Server.

7.3 Functional Testing

Test Case ID	Module	Test Case Description	Input Data	Expected Result	Status
TC001	Login	Verify valid login	Username: admin, Password: 1234	Redirect to dashboard	Pass
TC002	Login	Invalid login should fail	Username: fake, Password: wrong	Show 'Invalid credentials' error	Pass
TC003	Product Management	Add new product with valid data	Name: Cotton Shirt, Qty: 50	Product added and displayed in list	Pass
TC004	Product Management	Prevent adding duplicate product	Same Name and Category	Show 'Product already exists' message	Pass
TC005	Supplier Management	Add new supplier details	Name: ABC Traders, Contact: 9876543210	Supplier saved successfully	Pass
TC006	Purchase Management	Record a new purchase entry	Product: Cotton Shirt, Qty: 20	Stock updated, purchase recorded	Pass
TC007	Stock Management	Verify stock updates after	Add purchase of Qty 20 to existing	New stock = 70	Pass

			50		
TC008	Sales Management	Record a sale and update stock	Sell Qty: 10 of Cotton Shirt	Stock reduced by 10, sale entry created	Pass
TC009	Sales Validation	Prevent sale if stock not available	Stock: 5, Try to sell: 10	Show 'Insufficient stock' message	Pass
TC010	Payment Management	Record customer payment (Cash)	Customer: X, Amount: ₹2000	Payment added to customer account	Pass
TC011	Invoice Generation	Generate invoice after sale	Sale ID	PDF/Print invoice generated	Pass
TC012	Reports	View daily sales report	Date: Today	Show list of all sales of today	Pass
TC013	Customer Management	Add a new customer	Name: Gokul, Phone: 9876543210	Customer added successfully	Pass
TC014	Customer Validation	Prevent duplicate customer entry	Same name and phone	Show 'Customer already exists'	Pass

7.4 Sample Test Case

Test Case No:#01

Test Case Name: Register With Valid User Name And Password

Project Name: Textile Stock Management	
Test Case: Register	
Test Case ID: Function_01	Test Designed by: Gokul K
Test Priority (Low/Medium/High): High	Test Designed date: 07/07/2025
Module Name: Register	Test Executed by: Gokul K
Test Title: Verify user registration with valid data	Test Execution date: 08/07/2025
Description: Test the register module	

Pre-condition: All required fields must be available

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Navigate to register page	—	Register form should display	Register form displayed	Pass
2	Enter valid details	Name, Email, Password	Details accepted	Details accepted	Pass
3	Click Register	—	User account created	User account created	Pass

Post-condition: User account created and stored in the database
--

Test Case No:#02**Test Case Name:** Customer Details With Valid Data

Project Name: Textile Stock Management	
Test Case: Customer Details	
Test Case ID: Function_02	Test Designed by: Gokul K
Test Priority (Low/Medium/High): Medium	Test Designed date: 07/07/2025
Module Name: customer details	Test Executed by: Gokul K
Test Title: Add new customer with valid details	Test Execution date: 08/07/2025
Description: Test adding a new customer	

Pre-condition: Admin is logged in
--

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Navigate to customer page	—	Customer form is displayed	Customer form displayed	Pass
2	Enter customer details	Name: Arjun, Phone: 9876543210	Customer data accepted	Customer data accepted	Pass
3	Click Save	—	Customer saved in database	Customer saved in database	Pass

Post-condition: Customer is added and visible in customer list.
--

Test Case No:#03

Test Case Name: Product Details With Valid Data

Project Name: Textile Stock Management	
Test Case: Product Details	
Test Case ID: Function_03	Test Designed by: Gokul K
Test Priority (Low/Medium/High): Medium	Test Designed date: 07/07/2025
Module Name: product details	Test Executed by: Gokul K
Test Title: Add new product to the system	Test Execution date: 08/07/2025
Description: Test product entry functionality	

Pre-condition: Admin is logged in

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Navigate to product form	—	Product form should appear	Product form appear	Pass
2	Enter product info	Name: Cotton Shirt, Qty: 100	Product accepted	Product accepted	Pass
3	Click Add	—	Product saved to inventory	Product saved to inventory	Pass

Post-condition: Product is available in stock list

Test Case No:#04**Test Case Name:** Sales Details With Valid Data

Project Name: Textile Stock Management	
Test Case: Sales Details	
Test Case ID: Function_04	Test Designed by: Gokul K
Test Priority (Low/Medium/High): Medium	Test Designed date: 07/07/2025
Module Name: sales details	Test Executed by: Gokul K
Test Title: Record a new sale and update stock	Test Execution date: 08/07/2025
Description: Ensure sales reduce stock properly	

Pre-condition: Stock must be available

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Go to sales module	—	Sales form should open	Sales form opened	Pass
2	Add sale entry	Product: Cotton Shirt, Qty: 5	Sale accepted, stock checked	Sale accepted, stock checked	Pass
3	Click Submit	—	Sale recorded, stock reduced	Sale recorded, stock reduced	Pass

Post-condition: Stock reduced, invoice can be generated
--

Test Case No:#05

Test Case Name: Purchase Details With Valid Data

Project Name: Textile Stock Management	
Test Case: purchase Details	
Test Case ID: Function_05	Test Designed by: Gokul K
Test Priority (Low/Medium/High): Medium	Test Designed date: 07/07/2025
Module Name: purchase details	Test Executed by: Gokul K
Test Title: Record purchase and update stock	Test Execution date: 08/07/2025
Description: Test purchase entry adds stock	

Pre-condition: Product must be available

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Open purchase form	—	Purchase form is shown	Purchase form is showed	Pass
2	Add purchase data	Product: Cotton Shirt, 20	Data accepted	Data accepted	Pass
3	Submit purchase	—	Stock increased successfully	Stock increased successfully	Pass

Post-condition: Product stock is updated in inventory

Test Case No:#06

Test Case Name: Supplier Details With Valid Data

Project Name: Textile Stock Management	
Test Case: Supplier Details	
Test Case ID: Function_06	Test Designed by: Gokul K
Test Priority (Low/Medium/High): Low	Test Designed date: 07/07/2025
Module Name: supplier details	Test Executed by: Gokul K
Test Title: Test supplier registration	Test Execution date: 08/07/2025
Description: Admin is logged in	

Pre-condition: Product must be available

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Open supplier form	—	Supplier form is visible	Supplier form is visible	Pass
2	Enter supplier info	Name: ABC Textiles, Phone: 12345	Supplier accepted	Supplier accepted	Pass
3	Save the form	—	Supplier saved	Supplier saved	Pass

Post-condition: Supplier appears in supplier list

Test Case No:#07

Test Case Name: Customer Payment Details With Valid Data

Project Name: Textile Stock Management	
Test Case: Customer Payment	
Test Case ID: Function_07	Test Designed by: Gokul K
Test Priority (Low/Medium/High): High	Test Designed date: 07/07/2025
Module Name: Customer Payment	Test Executed by: Gokul K
Test Title: Log a customer payment successfully	Test Execution date: 08/07/2025
Description: Customer payment gets recorded	

Pre-condition: Sale entry should exist

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Open payment form	—	Payment form shown	Payment form showed	Pass
2	Fill payment details	Customer: Arjun, ₹2000	Payment accepted	Payment accepted	Pass
3	Submit	—	Payment added to records	Payment added to records	Pass

Post-condition: Payment entry saved and reflected in report

Test Case No:#08

Test Case Name: Billing Invoice With Valid Data

Project Name: Textile Stock Management	
Test Case: Billing Invoice	
Test Case ID: Function_08	Test Designed by: Gokul K
Test Priority (Low/Medium/High): High	Test Designed date: 07/07/2025
Module Name: Billing Invoice	Test Executed by: Gokul K
Test Title: Generate invoice for a completed sale	Test Execution date: 08/07/2025
Description: Generate and download customer invoice	

Pre-condition: A sale must be completed

Step	Test Steps	Test Data	Expected Result	Actual Result	Status
1	Select completed sale	Sale ID: #INV101	Sale selected	Sale selected	Pass
2	Click Generate Invoice	—	Invoice generated	Invoice generated	Pass
3	ClickPrint/Download	—	Invoice downloaded/printed	Invoice downloaded/printed	Pass

Post-condition: Invoice delivered to customer successfully

CHAPTER 8

CONCLUSION

The Textile Stock Management System was developed to streamline and automate the inventory and business operations of textile retail or wholesale businesses. This system efficiently handles various core functionalities such as customer management, supplier tracking, product stock maintenance, sales and purchase recording, customer payments, and invoice billing.

By implementing this solution:

- The manual workload is reduced significantly.
- The system ensures accurate stock updates during both purchases and sales.
- It improves data consistency and reporting across modules.
- Users can easily track customer dues and payments.
- Invoice generation is made faster and more reliable.

The testing process covered all modules in detail — including registration, login, sales, purchases, and billing — to ensure that the system meets both functional and performance expectations.

In conclusion, the Textile Stock Management System delivers a reliable and user-friendly platform that helps textile businesses operate more efficiently, reduce errors, and improve overall productivity.

CHAPTER 9

FUTURE ENHANCEMENT

In the future, the Textile Stock Management System can be enhanced by integrating barcode scanning for faster product handling, and adding SMS/email notification features for invoice and payment updates. A mobile application can be developed to provide on-the-go access for users, and the system can be migrated to the cloud for multi-branch, real-time accessibility. Role-based user access can be implemented to improve security and control. Additionally, graphical dashboards and GST/tax handling can offer better insights and compliance. Other valuable features include automatic data backup, customer loyalty programs, and AI-powered stock forecasting to help businesses plan inventory more efficiently.

CHAPTER 10

APPENDICES

10.1 SAMPLE CODING

Register.php
